

## **Information Security Major**

This major is mainly aimed at the needs of improving the security assurance ability in the process of the deep integration of industrialization and informatization of industrial enterprises. It adheres to the principle of “Enhance Morality, Foster Talents”, aims to cultivate front-line engineers who are not only capable of grasping basic knowledge of Humanities and Social Sciences, natural sciences, computer technology, industrial control system, as well as fundamental theories, basic technology and applied knowledge of information security, but also able to carry out engineering practice in the this field. The graduates can engage in security service, penetration testing, code analysis, emergency response, products’ pre-sale and after-sale service or grade protection assessment in industrial and information technology enterprises.

This major mainly trains first-line engineers who can carry out engineering practice in the field of information security in industrial control system. The graduates can work as security service, penetration testing, code analysis, emergency response, products’ pre-sale and after-sale service engineers, or grade protection assessors in industrial and information technology companies.
